

About the Marple Township Natural Gas Reliability Project

In May 2020, PECO began a natural gas reliability project in Montgomery and Delaware counties. As part of this 11.5 mile project, we will be installing two miles of new natural gas main in Marple Township as well as upgrading our natural gas plant in West Conshohocken.

Based on current operating and customer projections, in approximately 10 years without this project, the natural gas system in Delaware County will be capacity constrained. This could result in our existing customers not receiving the reliable natural gas service that they expect and deserve and will also prohibit new customers from connecting and experiencing the benefits of natural gas.
